 fencing

Applications:
 A fencing system used to divide and separate off areas.

Very simple to install, highly robust system, the plates cannot slip because they fit tightly into their rails on the posts to prevent unwanted vibration. The fence comprises a metal post made of 0.8 mm thick galvanised or pre-coated metal plating and 0.6 mm tapered sheeting with the same finish.

Blind fencing.

This reusable fencing system comprises a blind fence made of an outside-facing metal U or Z post or a corner post, both of which are highly impact resistant.

The 0.6 mm galvanised or pre-coated sheet module measures up to 4 m in length and 2.10 m in height.

Reusable posts.

Whenever the idea is to re-use posts in future fencing projects, they can be installed on anchors driven into the ground so that they can be subsequently removed and set on new anchors at the second site.
